PROJECTS

Microservices-Based E-Commerce System | Java, Spring Boot, Spring Cloud, PostgreSQL, JWT, Docker [Repo]

- Designed microservices architecture (User, Product, Order, Payment) improving modularity and scalability.
- Built REST APIs using Spring Boot and Spring Cloud (Eureka, API Gateway) for service discovery and routing.
- Implemented JWT-based authentication and RBAC securing 100% of protected endpoints.
- Enabled async communication using Kafka/RabbitMQ reducing inter-service coupling.
- Optimized PostgreSQL schemas and query performance using indexing and caching strategies.

Employee Management System | Spring MVC, Hibernate/JPA, PostgreSQL, JSP, Bootstrap [Demo | Repo]

- Developed CRUD web application using Spring MVC managing complete employee lifecycle operations.
- Implemented Controller–Service–DAO architecture improving maintainability and code separation.
- Integrated Hibernate/JPA reducing manual SQL and improving data handling efficiency.
- Built responsive UI using JSP/JSTL and Bootstrap enhancing user interaction.

Alma Orb — Alumni Association Platform | React.js, Node.js, Express, MongoDB, JWT [Live Demo]

- Developed full-stack alumni platform supporting mentorship matching, job portal, and event management.
- Built REST APIs using Node.js and Express with JWT authentication for secure access control.
- Designed responsive React.js frontend improving cross-device usability.
- Integrated MongoDB enabling flexible schema design and efficient data storage.

Property Management Database Systems | Oracle SQL, PL/SQL [Demo]

- Designed normalized relational schemas improving data integrity and consistency.
- Implemented indexing strategies reducing query execution time significantly.
- Automated workflows using PL/SQL stored procedures and triggers minimizing manual operations.

Java DSA Mini Projects | Java, Arrays, Data Structures, OOP [Repo]

- Built a console-based **Bus Seat Booking System** using 2D arrays with validation logic to prevent seat conflicts.
- Implemented a custom **Queue** using fixed-size arrays with enqueue/dequeue operations.
- Implemented a custom **Stack** using arrays supporting push/pop operations and overflow handling.
- Developed a **Custom ArrayList** with generics and auto-resizing mimicking Java's built-in ArrayList.

EDUCATION

Godavari College of Engineering Jul 2025
B.Tech, Computer Engineering - 7.19 [DBATU]

Orion CBSE English Medium School Mar 2021
[SSC], [HSC] [CBSE]

TECHNICAL SKILLS

Languages: Java, SQL, JavaScript, ReactJs

Frameworks: Spring Boot, Spring MVC, Hibernate/JPA

Databases: PostgreSQL, Oracle SQL, MongoDB

Tools: Git, Maven, Postman, Docker, SwaggerUI, Postman, Eclipse, VS Code, IntelliJ IDEA Ultimate, pgAdmin4

Concepts: OOP, REST APIs, Microservices, MVC Architecture, RDBMS

CERTIFICATIONS & ACHIEVEMENTS

- Java Full Stack Development — QSpiders, Deccan, Pune [Certificate]
- Full-Stack Web Development Bootcamp — Udemy [Certificate]
- StackHack 2.0 Hackathon — Mercer — Mettl Rank 12th Nationally [Certificate]
- Postman API Fundamentals Student Expert [Demo | Certificate]
- Smart India Hackathon — Internal Participant [Certificate]
